Information

The Address of the various peers:
Client1: http://localhost:8001/MessageService
Client1: http://localhost:8002/MessageService

Server1: http://localhost:9001/MessageService
Server2: http://localhost:9002/MessageService

To Start the Project:
You will find four solution folder in this Project, to start the clients and servers you have to run compile.bat and run.bat from all the solution folder.

Operation Flow:
1. First you have to select any particular server from Drop Down list, and then you can click on Connect Button.

2. Once You Connect with the server you will find Project List available on that server's local directory (Here for this project we consider Local Directory as "TESTFOLDER" on both server)

3. Select any Project from the list and click on Dependency Button. Client send the requests to both server, for Out Going Dependency and In Coming Dependency.

4. After that, you will be redirected to Result Tab where you can find different button show various result.

5. You can check the Message Log for various request/response and Time Stamp.
